Symposium Activities

Lab Visits

Tour two cutting-edge research laboratories to gain first-hand experience in ongoing research! Participants meet faculty, post docs, and graduate students as they participate in demonstrations and learn about science careers.

Keynote Speakers

Research faculty from the sciences and humanities share recent works and discoveries in their field. Keynote speakers engage participants during these interactive talks and are available to answer questions.

College Readiness

Participate in hands-on activities and learn about undergraduate scholarship and research opportunities while interacting with administrators, departmental representatives, and current students from various pre-professional organizations during the UF College Fair.

Student Research Presentations

All student participants have the opportunity to present their research or scientifically-inspired artwork at JSEHS during the non-competitive poster session! Students in grades 9 and 10 may also register as a research presenter to give a short talk on library or bench research.

STEM Research Competitions

Students in grades 11 and 12 may apply to compete in STEM Research Competitions for best-in-state recognitions, scholarship awards, and an opportunity to represent Florida at the National Junior Science and Humanities Symposium.

"Attending JSEHS opened my eyes to the opportunities offered by the University of Florida. The lab visits provided great insight and inspiration. Seeing so many ambitious youth my age was very fulfilling." - Student Participant

Visit www.cpet.ufl.edu for more information, including program cost, and to register.
